

Detailed Application User Manual

This document serves as a detailed guide for all CRM roles, specifying stages, data attributes, and transitions.

1. Introduction and System Access

System access is provided strictly through assigned credentials (email and password). The initial password should be changed as soon as possible in the Profile section. The system organizes data into commercial opportunities called Deals.

2. Pipeline Stages & Transition Requirements

To move a deal to the next stage, strict data validation rules must be met. Missing required fields will block the transition.

1. Lead [Owner: Hunter]

- Assigned Hunter (Hunter ID).
- Company ID / Registration Number.
- At least 1 completed activity (Call, Teams, Meeting) dated present or past.

2. Opportunity (Qualified Opportunity / SQL) [Owner: Hunter]

- Assigned Hunter (Hunter ID).
- Selected Lead Source from enumeration.
- Selected E-commerce Platform.
- Positive Estimated Monthly Parcels (> 0).
- SQL Qualification: Upon meeting requirements, an [SQL ->] button appears on the Kanban card above the hunter icon to advance directly to Discovery with a confirmation alert.

3. Discovery & Proposal [Owner: Closer]

- Assigned Closer (Closer ID).
- Selected Delivery Countries (at least 1 country).
- Average Items Per Order (> 0).
- Average Parcel Weight (> 0 kg).
- Average Parcel Volume (> 0 m3).
- Uploaded at least 1 Pricing Offer PDF.

4. Contracting [Owner: Closer]

- Assigned Closer (Closer ID).
- Contract Signed Date.
- Pricing Uploaded Date.
- Selected IT Integration system.
- Expected First Stocking Date.

5. Onboarding [Owner: Farmer]

- IT Integration Completed Date.
- Actual First Stocking Date.
- UAT Testing Completed Date.

6. Farming (Live operations) [Owner: Farmer]

- Final production stage. Live order processing.

7. Lost & Postponed

- Lost: Requires selecting a Lost Reason from enumeration.
- Postponed: Requires Postponed Until date and reason.

3. User Roles and Operations

Role: Hunter

Operates primarily in the early stages (1. Lead -> 2. Opportunity -> Discovery).

- Creates new Deals (Company Name, ID, Source).
- Fills basic e-commerce platforms and Lead Sources.
- Enters and manages contact persons for the company.
- Creates meetings and logs history (read-only for others later).

Role: Closer

Receives the Deal after Proposal, focuses on Contracting.

- Manages parcel attributes (Weight, Volume, Items).
- Defines delivery countries (Delivery countries multi-select).
- Can mark client contacts as DNC (Do Not Contact).
- Uploads pricing offers (PDFs) clicking "Add Offer".

Role: Farmer (Account Manager)

Handles live (Farming) and onboarding clients.

- Communicates with IT to log "IT Integration Completed" dates.
- Identifies actual launch metadata and overrides estimates.
- Can tag client contacts as "Inactive" if they leave their company.

Role: Manager

Supervisor of Hunter/Closer/Farmer roles.

- Sees Deals owned by their subordinates across the Kanban board.
- Inherits edit permissions for subordinate deals.
- Monitors Email logs and synced calendars.

Role: CSO (Chief Sales Officer)

Absolute access to the Sales Pipeline.

- Can change role assignments (Hunter, Closer, Farmer) in real-time via the "Company Details" tab.
- Can hide sensitive activities (Visible: false) from lower roles.

Role: Admin

Ensures technical operation.

- "Admin Panel": Creates users, resets passwords.
- Manages enumerations: "Lead Sources", "Lost Reasons", etc.
- Manages Login logs and the full audit trail (tracking all field changes).

4. Email & Calendar Synchronization (M365 & Google)

The application integrates email communication and calendars across all connected Microsoft 365 and Google Workspace accounts:

- **Strict Email Sync Matching Rule:** Emails are associated with an opportunity EXCLUSIVELY if the sender or recipient list contains an email address linked to the deal company or its contacts, AND the message simultaneously involves the CRM user's email address. Unrelated or private messages are strictly filtered out and deleted.
- **Permanent CRM History:** Synced emails remain permanently preserved in CRM deal history even if deleted from the user's Outlook or Gmail mailbox later.
- **Calendar Meetings:** Meetings scheduled in the CRM automatically synchronize to external user calendars with MS Teams or Google Meet links.

5. Stage Inactivity Rules & Color Reminders

Card highlighting in Kanban/List and email dispatch triggers ONLY upon meeting all 3 conditions:

1. **Time in Stage:** At least X days have passed since moving into the stage.
2. **Time Since Activity:** At least X days have passed since any update, activity edit or deletion (deletion restarts the clock).
3. **Time Since Event Date:** If a future event is scheduled, inactivity countdown begins only after the event date has passed.

6. UI Screenshots and Interfaces

D1: Header Panel

On the right side next to the user avatar, you can find language switchers, a gear icon (Calendar Integrations - Google & MS), and clicking your avatar opens this profile.

D2: Deal View

Split view:

- **LEFT PANEL:** Company details, Tags, Products, Stage transitions (Move stage = Green "Advance to..." button). If a field shines red, data is missing for the transition.
- **RIGHT PANEL:** Activity Logs, Documents, and historical entries.
